

# RESPIRE CARE

Providing a break for carers and individuals, respite care with Hamberley Neurocare is suitable for individuals living with a range of neurological disabilities and conditions.

Respite care planning includes a pre-stay assessment to ensure that our interdisciplinary team can support people to maintain their independence during their time with us, with therapeutic interventions as required.

Our specialist team can also work with individuals and families to plan for longer-term complex care, support for progressive conditions, or more intensive residential rehabilitation.

Individuals stay at our modern and stylish service, with exceptional care and therapy, delicious food with a wide range of meal choices and expert support and companionship from our dedicated team.
